Patent No. 6306397

General No. 6306397

GENERAL INFORMATION:

APPLICANT: EDWARDS, Stirling John

APPLICANT: WEBB, Elizabeth Ann

APPLICANT: WEBB, Elizabeth Ann

APPLICANT: FRAZER, Ian

APPLICANT: FRAZER, Ian

TITLE OF INVENTION: VARIANTS OF HUMAN PAPILLOMA VIRUS ANTIGENS

FILE REFERENCE: 017227/0148

CURRENT APPLICATION NUMBER: US/09/359,382

CURRENT FILING DATE: 1999-07-23

ERALIER APPLICATION NUMBER: PCT/AU95/00868

EARLIER FILING DATE: 1999-09-22

EARLIER FILING DATE: 1999-12-20

Application US/08860165A

Patent No. 6004557

GENERAL INFORMATION:

APPLICANT: EDMARDS, Stirling John

APPLICANT: COX, John Cooper

APPLICANT: WEBB, Elizabeth Ann

APPLICANT: PRAZER, Ian

TITLE OF INVENTION: VARIANTS OF HUMAN PAPILLOWA VIRUS ANTIGENS

FILE REFERENCE: 17227/130

CURRENT FILING DATE: 1995-09-22

EARLIER PILING DATE: 1995-09-22

EARLIER FILING DATE: 1995-12-20

EARLIER FILING DATE: 1994-12-20

NUMBER OF SEQ ID NOS: 15

SOFTWARE: PAPENTING VARIANTS OF NO. 157

EARLIER PILING DATE: 1994-112-20

NUMBER OF SEQ ID NOS: 15

SEQ ID NO 12

LENGTH: 172
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

US-10-476-570-36

US-10-476-570-36

Sequence 36, Application US/10476570

Publication No. US20040170644A1

GENERAL INFORMATION:

APPLICANT: COMMISSARIAT A L'ENERGIE ATOMIQUE

APPLICANT: MALLERE, BETTACT

APPLICANT: MALLERE, BETTACT

APPLICANT: BOUNGAULT-VILLADA, Isabelle

APPLICANT: POUVELLE-MORATILLE, Sandra

APPLICANT: GUILLET, Jean-Gerard

TITLE OF INVENTION: Mixture of peptides derived from E6 and/or E7

TITLE OF INVENTION: Mathematical proteins and uses thereof

TITLE REFERENCE: 45636-5071-US

CURRENT PILING DATE: 2003-11-04

PRIOR APPLICATION NUMBER: PCT/FR02/01533

PRIOR APPLICATION NUMBER: PC 01 05980
                    Sequence 77, Application US/10751845

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 4, Application US/08316239B
Patent No. 5679509
GENERAL INFORMATION:
APPLICANT: Parmenter, Cheryl A.
ITILE OF INVENTION: Methods and a Diagnostic Aid for
TITLE OF INVENTION: Distinguishing a Subset of HPV that is Associated with an TITLE OF INVENTION: Increased Risk of Developing Cervical Dysplasia and ITILE OF INVENTION: Cervical Cancer
NUMBER OF SEQUENCES: 4

Patent No. 642807

GENERAL INOFMATION:

APPLICANT: MACFALLAN, RODERICK I.

APPLICANT: MALLIAROS, JIM

TITLE OF INVENTION: CHELATING IMMUNOSTIMULATING COMPLEXES

FILE REFERENCE: 017227/0118

CURRENT APPLICATION NUMBER: US/09/367,309A

CURRENT FILING DATE: 1999-08-11

PRIOR APPLICATION NUMBER: PUT/AU98/00080

PRIOR FILING DATE: 1999-02-13

PRIOR FILING DATE: 1999-02-13

PRIOR FILING DATE: 1999-02-13

NUMBER OF SEQ ID NOS: 6

SOFTWARE: PATENTIN Ver. 2.1

SEQ ID NO 1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               APPLICANT: Cabezon Silva, Teresa

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           jednence 14
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence Sequence Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence
